# We conduct over 20 million assessments each year, delivering foresight in four key areas

## Foresight for Talent Acquisition

- High-volume and graduate
- Experienced hires
- C-Suite and executive

Covering breadth and depth of roles and levels of seniority, including assessments for career guidance, internal talent mobility and transition.

## Foresight for Development

- Executive leadership
- Global leadership
- High potential identification
- Succession planning

End-to-end tech enabled, differentiated offering including level and role appropriate psychometrics, 360 surveys, virtual development centers, development programs and coaching.

## Foresight for Transformation

- Workforce transformation
- M&A and restructure
- Digital readiness and cyber-security
- Future of work and skills

Transformative solutions for workforce transitions including restructures, M&A, privatization, divestures and scalable skill assessments integrated with Mercer's Skills Edge.

## Foresight for Sustainability

- Total well-being
- Sustainability mindsets
- Remote and hybrid working
- Team effectiveness
- Youth and gender inclusion

Newer, innovative individual and team diagnostic to support total workplace wellbeing, sustainability, inclusion and work redesign.

Powered by **Mercer's AI-driven platform** and **world-class advisory expertise**

# AI & CyberSecurity With Mercer

# 02

Assess, develop  
& build your  
cyber defense  
with Mercer's  
Cyber Risk Assessment

# AI and gen-AI are now essential tools for the modern workforce

With technological advancement comes risks

75%

increase in the known number of cyber-attacks over the past 5 years.

Source: EY 2023 Global Cybersecurity Leadership Insights

People risks augment vulnerability and costs

4.45 M

The global average cost of a data breach in 2023 was US\$ 4.45 million.

Source: IBM Cost of a Data Breach Report 2023

Risk culture needs evaluation and correction

84%

of employee report exposing their company's proprietary data<sup>3</sup> in the past three months.

Source: Oliver Wyman Forum (How Generative AI is transforming Business and Society)

A security-first organization builds partner and customer trust

99%

of attacks can be prevented with basic security hygiene.

Source: Microsoft Digital Defense Report 2023

Build a workforce equipped with cybersecurity skills to make a human firewall.

# Employee attitude and skills drive organizational safety

Employees who have high skills and high security-conscious attitude need to be nurtured to build culturally mature teams.

While the employees who lie in the low skills and low security-conscious attitude need support through development programs.

# Cyber Security Assessment for Everyday Users

Baseline cyber awareness and safe behaviours expected across the workforce

The Cybersecurity Everyday Users Assessment evaluates a candidate's understanding of essential **foundational cybersecurity practices and digital risk awareness**.

**Everyday users** refer to individuals who regularly use digital devices and engage in online activities as part of their professional responsibilities. This includes employees in various industries, such as finance, healthcare, technology, and government, who rely on computers, mobile devices, and internet-connected systems for their work in everyday workplace scenarios.

This test is designed for candidates across all experience levels.

The test covers scenario based questions that cover applied skills

# Roadmap for a security-first organization:

Build effective cybersecurity risk mitigation strategies

## Phase 1 & 2 outcome

### Input

Identified critical skills (soft & hard) based on critical roles.

| Critical Role     | Security Risk & Compliance Specialist                                     |
|-------------------|---------------------------------------------------------------------------|
| Competency        | Skill                                                                     |
| COBIT             | COBIT - COBIT - Concept                                                   |
|                   | COBIT - Component - Concept                                               |
|                   | COBIT - Enterprise goals - Concept                                        |
|                   | COBIT - Enterprise Metrics - Concept                                      |
|                   | COBIT - IT Goals - Concept                                                |
|                   | COBIT - Principle - Concept                                               |
|                   | Risk Assessment - Concept                                                 |
| Risk & Compliance | Policy Compliance - Concept                                               |
|                   |                                                                           |
| ITIL              | ITIL - Change management - Application, Analysis                          |
|                   | ITIL - Incident management - Application, Analysis                        |
|                   | ITIL - Problem Management - Application, Analysis                         |
|                   | ITIL - Service Asset and Configuration Management - Application, Analysis |
|                   | ITIL - Service Validation - Application, Analysis                         |
|                   | ITIL - Continual Service Improvement - Application, Analysis              |
|                   | ITIL - Service Design and life Cycle - Application, Analysis              |
|                   | ITIL - Service Generation - Application, Analysis                         |
|                   |                                                                           |

Mobilize

## Talent Acquisition

### Hiring for AI agility

- Assess and hire AI-ready talent that delivers.
- Promote equitable AI adoption by bridging gender gaps and fostering diverse talent.

## Talent Management

### Targeting development initiatives

- Highlight workforce strengths, map talent, and identify gaps to design impactful AI upskilling programs.
- Workforce development through structured plans.

## Workforce Transformation

### Enabling confident AI adoption

- Assess workforce agility for the organization-wide utilization of AI tools.
- Evidence based planning of enterprise AI adoption.

Relevant for clients in APAC

# Mercer's AI Agility Assessment Suite

# Our Assessment Approach

# 03

# Engagement Approach

**Use Case** – To gauge where the workforce stands in current Job Role as per Global Benchmarks\*

## **Assessment 1** – AI based Role Specific Assessment

- 45 – 60 min duration (configurable)
- Measures role-critical Domain/IT capability plus the applied (AI) skills needed to perform that role effectively in an AI-enabled workplace

## **Assessment 2** – Cyber Security Assessment for Everyday Users

- 30 min duration
- Measures baseline cyber hygiene and security awareness expected of all employees

\*SME-led benchmarking is used to establish global-standard comparisons where Analytics benchmarks are unavailable, particularly for emerging skills.

# Engagement Approach

**Use Case** –Assessments to check current organization wide AI standing

The requirement is to **track and validate workforce AI readiness on an ongoing basis**, as **GenAI tools and ways of working evolve rapidly**.

Because capabilities, risks, and best practices change frequently, a quarterly pulse helps ensure employees maintain **current, relevant AI skills**—not just a one-time baseline.

The **AI skill areas covered will be co-defined with the client** to ensure alignment to client's retail roles, priority use cases, and approved tool landscape.

## **Assessment 3 –AI readiness Assessment**

- 20-30 min Duration  
(configurable)

Assume John frequently forgets his passwords and resets them often. In order to simplify access, he decides to use a password manager. What is the main security advantage of using a password manager in this scenario? Select the correct answer from the given choices

Select an option Clear Response

- ☐ It replaces the need for passwords completely
- ☐ It allows sharing passwords through email safely
- ☐ It securely stores complex passwords that John doesn't have to remember
- ☐ It prevents websites from requesting passwords

1. Hands-On Programming

Question 1

How to Attempt?

Golden Brick Road

Julia has reached the Munchkin kingdom in the magical land of Oz. To enter the castle of the great wizard, she needs to cross the Golden Brick Road, where all the bricks are aligned in a straight line. To cross this road, there are some conditions set by the wizard, which are:

- There are  $N$  bricks, and each brick is labeled randomly with a number from 0-9.
- Julia is initially on the 1<sup>st</sup> brick and needs to reach the  $N^{\text{th}}$  brick to cross the Golden Brick Road.
- If she is on the  $i^{\text{th}}$  brick with value  $V$ , then she can move to the  $(i+1)^{\text{th}}$  brick,  $(i-1)^{\text{th}}$  brick or any brick with the same value  $V$ .

You are given an integer  $N$ , representing the number of bricks, and an integer array  $A$ , representing the value on each brick. Your task is to help Julia find and return an integer value representing the minimum number of moves required to reach the  $N^{\text{th}}$  brick.

Input Specification:

input1 : An integer value  $N$ , representing the number of bricks.  
input2 : An integer array  $A$ , representing the value on each brick.

Output Specification:

Return an integer value representing the minimum number of moves required to reach the  $N^{\text{th}}$  brick.

Example 1:

input1 : 6  
input2 : {5,2,3,4,5,3}

Output : 2

Explanation:

Julia needs to reach the 6<sup>th</sup> brick to cross the Golden Brick Road. She can do so optimally in the

1

Compiler: gcc 8.4.0

```
1 #include<stdio.h>
2 #include<string.h>
3 // Read only region start
4
5 int leastMoves(int input1,int input2[])
6 {
7     // Read only region end
8     // write code here
9
10 }
```

Use Custom Input

3. Data Modelling

Attempted: Q18

Revisit Later

Select an option

Clear Response

☐ You can use this model to define attributes, primary keys, and foreign keys in each entity, with entity names and entity relationships.

☐ You can use this model to carry out the actual design blueprint for the database implementation by DBA and database developers.

☐ You can use this model to define entity names and entity relationships but you can focus on technical problems, computer systems, or database management systems.

☐ You can use this model to define the qualitative data. As it contains only the dimension keys and data objects which act as an association between different data objects, and the rules.

- Hadoop
- Data Modelling

# AI Skills for Developers

Applicable for Software Developers

- AI Foundations
- Prompt Engineering
- Code Verification
- Security Hygiene
- Business Context

# AI Agility (Readiness) Assessment Sample Report

## INDIVIDUAL DEVELOPMENT PLAN

*This section offers developmental tips for individuals with low or moderate scores on competencies, cognitive ability, or prompt engineering. No tips are given for high scores, as they reflect good performance.*

### Collaboration

- 63 Support a teammate on a generative AI project once a month. Participate in or facilitate team discussions on generative AI. Practice active listening by summarizing key points in meetings. Attend a teamwork or collaboration workshop.

### Prompt Engineering

- 63 Read tips on creating effective prompts. Practice writing clear prompts for generative AI tools weekly. Ask generative AI for feedback on your prompts and refine them; ask generative AI itself to critique your prompts; ask experts and peers for feedback. Experiment with different prompt styles and note what works best.

### Abstract Reasoning

- 63 Learn to spot common generative AI mistakes, like missing details or logical errors. Practice using generative AI on familiar topics, then review the results carefully. Use a simple checklist such as "Are anything missing?" or "Does this make sense?" to evaluate generative AI outputs critically.

# Secure and credible platform that ensures integrity

## Candidate authentication

# Assessment reports

## Individual Reports

### Summary of a person's overall profile, including:

- Readiness
- Past pivotal experiences
- Potential
- Aspirations
- Individual strengths and developed areas

## Leadership Pipeline Report

### Comprehensive overview of the succession pipeline, including:

- Scorecard view of the current state of the pipeline
- **Bench strengths** - Number of successors for each in-scope role and respective Readiness
- Development needs necessary for the identified successor to successfully assume the role in the future

# Success stories

# Toyota

Japanese multinational automotive manufacturer headquartered in Toyota City, Aichi, Japan. World's largest manufacturer producing 10 million vehicles per year.

## Problem statement

Implementing a standardized training plan for sales consultants and team Leaders

## Solution offered

- Developing a detailed competency framework using in-depth sensing, focused group discussions, and interviews
- Industry benchmarking against the developed competency framework
- Psychometric assessment battery along with cognitive and behavioral tests designed as per the competency framework

## Impact

- Assessments created for two profiles, sales consultants and team leaders
- Identification of key strengths and development areas
- Individual development plan for learning and succession planning.
- Decrease in time and effort and increase in performance

# Hipo identification and Development intervention (internal succession)

## Problem statement

- Identification of high potentials, readiness of identified successors and development areas of all the employees
- Carrying out the exercise for different departments, roles, hierarchy for 200+ employees

## Solution offered

- **Our HiPo and Leadership frameworks** were used along with the organization's own value framework
- The organization conducted **VDCs** for IC and Team leads and a **blended DC** for the line managers.
- **Post the centers, our assessors conducted individual sessions** with the immediate managers and HR SPOC
- **Group reports** were also shared with the organization

## Impact

- Group reports **helped identify the high potentials and provided a detailed development journey for the employees**
- The assessor sessions for the IC roles **helped identify the development areas and provided a vision** for their growth

# Thank you

We are leaders in risk, strategy and people. One company, with four global businesses, united by a shared purpose to build the confidence to thrive through the power of perspective.
